

**List of Contributed papers
(Posters)**

Contributed papers (posters) - Varenna 2014

P-1	Buchholz	Rico	Toroidal momentum transport in a tokamak due to profile shearing
P-2	Ghendrih	Philippe	Energy confinement time scaling in GYSELA flux driven simulations: ρ^* and isotope effect
P-3	Hill	Peter	The effect of magnetic islands on ITG turbulence driven transport
P-4	Kwon	Jae-Min	New Semi-Lagrangian Algorithm for ITG-TEM Gyrokinetic Turbulence Simulation
P-5	Merlo	Gabriele	Investigating the role of profile stiffness on turbulent transport in shaped TCV discharges using gyrokinetic simulations
P-6	Migliano	Pierluigi	Non-local transport in gyro-kinetic turbulence
P-7	Norscini	Claudia	Turbulent transport close to marginal instability: role of the source driving the system out of equilibrium
P-8	Swamy	Aditya K.	Role of Trapped Electrons on Global Gyrokinetic Linear Stability of Microtearing Modes
P-9	Toda	Shinichiro	How to apply a turbulent transport model based on a gyrokinetic simulation for helical plasmas
P-10	Hoelzl	Matthias	Non-Linear Simulations of MHD Instabilities in Tokamaks Including Eddy Current Effects and Perspectives for the Extension to Halo Currents
P-11	Jaulmes	Fabien	Comparison of analytical estimates of TAE growth rate with results from kinetic simulations
P-12	Schneller	Mirjam	Study of Nonlinear Fast Particle Transport and Losses in the Presence of Alfvén Waves
P-13	Bilato	Roberto	Simulations of fast-wave current drive in pulsed and steady-state DEMO designs
P-14	Faustin	Jonathan	Modeling of ion-cyclotron resonant heating in Wendelstein 7-X equilibrium
P-15	Raghunathan	Madhusudan	Fast Ion Guiding Center Orbits in 2D and 3D Toroidally Rotating Tokamak Plasmas
P-16	Singh	Rameswar	Geodesic acoustic modes in tokamak plasmas
P-17	Guillard	Hervé	Parallel Kelvin-Helmholtz instabilities in edge plasma
P-18	Salmagne	Christian	Grid-free tree-code simulations of the plasma-material interaction region
P-19	Yamaguchi	Hiroyuki	Progress in the Integrated Transport Code, TASK3D, and its Application to the Time-evolving LHD Plasmas
P-20	Zocco	Alessandro	Magnetic compressibility and ion temperature gradient driven microinstabilities in magnetically confined plasmas
P-21	Zarzoso	David	Progress on gyrokinetic simulations of magnetic islands and the impact of turbulence on the neoclassical drive of small magnetic islands
P-22	Wersal	Christoph	A kinetic neutral atom model for tokamak SOL turbulence
P-23	Villard	Laurent	Turbulence and zonal flow structures in the core and L-mode pedestal of tokamak plasmas
P-24	Tholerus	Simon	Assessment of the quasilinear model for the bump-on-tail instability
P-25	Mollén	Albert	On collisional impurity transport in nonaxisymmetric plasmas

P-26	Madsen	Jens	Lagrangian invariants and coupling of pressure and electric field in a gyrofluid model
P-27	Buxton	Peter	Plasma confinement within a high field spherical tokamak
P-28	Holod	Ihor	Gyrokinetic Particle Simulations of Kinetic Ballooning Mode in Tokamak Pedestal
P-29	Comisso	Luca	Formation of plasmoid chains in fusion relevant plasmas
P-30	Nicolas	Timothee	Sawtooth driven particle transport in tokamak plasmas
P-31	Strumberger	Erika	Linear stability studies including resistive wall effects with the CASTOR/STARWALL code
P-32	Hellsten	Torbjörn	An iterative method for including Doppler shift in global wave solvers using FEM decomposition
P-33	Garbet	Xavier	Turbulent current drive
P-34	Cardinali	Alessandro	Self-consistent quasi-linear modeling of Lower Hybrid Current Drive in ITER and DEMO
P-35	Manfredi	Giovanni	Eulerian Vlasov code for plasma-wall interactions
P-36	Shanahan	Brendan	X-point modelling using BOUT++
P-37	Xu	Xinyang	Trapped Energetic Particles Effect on Resistive Wall Mode and Excitation of Fishbone-Like Mode in RFP Plasma
